Crystal Dairy Wins More Prizes

The Crystal Dairy with an exhibit taken from their regular commercial churning at the Didsbury Creamery were successful in taking a second prize at Regina and topped the third prize section at Saskatoon. This exhibit was in competition with special churning by other competitors from all over Canada.

This completes the exhibits in the major Western Circuit, and during the season they have been successful in obtaining 2 firsts, 2 seconds and 1 third.

Bride Honored.

A delightful shower was held on Friday afternoon at the home of Mrs. A. Orde in honor of Mrs. Ernie Fisher, a recent bride.

Blocks for a quilt were made by the guests and prizes were won for the nearest blocks by Mrs. Henry Fisher and Mrs. B. Collinge. Miss Marion Holmes and Master Clifford Johnson, attired as bride and groom, entered the room with a basket filled with useful presents for the bride.

Mrs. Louis Holmes and Mrs. Erven Rodney assisted the hostess.

WEEKLY JOKE

Mrs. Jones was spending the day in bed with a severe cough, and her husband was working in the backyard, hammering nails into some boards. Presently his neighbor came over. "How's the wife?" he asked. "Not very well," said Jones. "Is that her coughin'?" "No, you fool," replied Jones, "it's a henhouse."

Meet After 42 Years

A brother and sister met for the first time in 42 years last Friday when Mr. and Mrs. Robert McVea motored from Chicago to visit with Mr. and Mrs. Tom Duncan.

Mrs. McVea is a sister of Mr. Duncan and they were separated so young that they do not remember seeing each other. They were born at Perth, Scotland, and there were seven small children in the family when both parents died. They were cared for by relatives, some moving to Canada and others to the United States.

There were four brothers and three sisters in the family one living in Montreal, one in Winchester, four in Chicago and Tom at Didsbury.

Will Build New Funeral Home

W. Durrer has commenced the erection of a new and up-to-date funeral home. The full basement has already been completed and work on the building will shortly be commenced.

The funeral home will be a two-storey building 26 by 30 feet, with stucco walls and a glassed-in porch in front. The chapel and undertaking parlour will be on the main floor, and on the second storey will be the show rooms.

Mr. Durrer says that when the building is completed he intends to beautify the grounds and make the establishment a credit to the town.

Thrill of the Fair!

To Billy Ross, manager of the local branch of the Calgary Power Company, goes the honor of providing the biggest thrill of the Olds Fair. Billy was determined to make his first parachute jump—and he did, while hundreds of spectators watched the intrepid electrician with their "hearts in their mouths." Undaunted and possessing an abundance of nerve, Billy donned the chute equipment, boarded the huge trimotor plane and soared high. At a given signal Billy obeyed the letter the brief instructions by a professional jumper and threw himself into space. The crowd was terrified until the parachute opened and the rider gracefully descended, landing in a grain field not far from the starting point.

His contact with the earth was not so successfully accomplished as hoped for, as his shoulder was dislocated in the fall. It is known, however, that his shoulder has a bad habit of acting up in the same manner when playing hockey. In fact it is such a common occurrence that it is taken for granted that all he has to do is to see his doctor and all is well again.—
OLDS GAZETTE

W.C.T.U. Supper.

You are invited to come and have supper with the WCTU Ladies and friends in the Leuzler Block on Saturday evening, 5:30 to 8 o'clock. Remember—all you can eat for 25c! Sale of homecooking in the afternoon.

Mr and Mrs Charles Edwards of Calgary visited with the three Hunsperger families this week.

Federal Election Announced

October 14th is the date set for the Federal elections. This news was spread throughout Canada last week.

Outstanding Pictures Booked for Didsbury

W. H. B. Sharp has booked a number of 3 and 4-star pictures for Didsbury, and the movie audiences are to be given some real treats in the near future. Tonight, Thursday, will see the second showing of "Clive of India," one of the outstanding pictures of the year.

This Saturday: Victor McLaglen in "Laughing at Life"

Next Wednesday and Thursday: Jean Harlow in "Reckless."

September 11-12: "Keeper of the Bees"

September 18-19: "Brewster's Millions."

September 25-26: "Honeymoon Limited."

October 16-17: George Arliss in "Cardinal Richelieu"

Obituary.

OLIVER BOLANDER

Oliver Bolander, who was well known in the Didsbury district, passed away at Calgary General Hospital on Friday August 16, after a short illness.

Coming to Didsbury in 1900 with his parents, they settled in the Waterloo district. They moved to Bearberry district in 1922 and he resided in that district up to the time of his death.

He leaves to mourn his loss his stepmother, Mrs. Andrew Bolander three brothers, William, Henry and Addison all at Bearberry, and one sister, Mrs. Dunham James of Calgary; also relatives in Ontario.

The funeral service was held at Waterloo Church on Monday afternoon and interment was at the Waterloo Cemetery. Rev. J. H. Harder conducted the services.

CARD OF THANKS

We wish to thank our many friends and neighbours for the kind expressions of sympathy during our recent bereavement.

Sheline and Sinclair Address Meet Here

The Liberals delivered their last broadside of the campaign at Didsbury on Monday evening when A. Sheline and A. Macleod Sinclair addressed a well-attended meeting.

Mr. Sheline outlined his stand and declared that he stood pat behind the Liberal platform. He said he had studied the Social Credit Scheme at the outset and had formed the opinion that it was impractical and unworkable under our form of government. He said that the best way to achieve monetary reform was to join the other eight provinces of Canada and return a Liberal administration to Edmonton. In answer to a question he stated that he was in favor of reducing the sessional indemnities of the Legislature to \$1200.00 per year and the ministers' to \$4500.00.

Mr. Macleod Sinclair dealt entirely with social credit, and quoting from Social Credit literature claimed that the leader of that party was inconsistent in both his writing and speeches.

Mr. C. H. Adshead acted as chairman of the meeting.

Conservative Meeting.

A. S. Gough, provincial Conservative candidate for this constituency, and H. S. Patterson, K.C., Calgary, were the speakers at a well-attended meeting Friday evening in the Opera House.

Mr. Gough's address was brief and was confined almost entirely to the essentials of the Conservative platform as compared with the platforms of the other parties.

Mr. Patterson, after reminiscing on the days of his residence in Didsbury, got down to "brass tacks" and endeavored to make it clear that his party made no rash promises that could not be certain of fulfillment in the event of their being elected to power. He attacked the other parties, especially the Social Credit party, showing by concrete facts that the latter scheme could only end in chaos.

Mr. H. W. Chambers was chairman of the meeting.

Evangelical Church Notes

Next Sunday at the morning service the Pastor's sermon theme will be, "What Should We Expect of Our Religion?" In the evening the Pastor will attempt to answer the question, "Is Canada on the Road to Ruin?"

Today is Voting Day

All the politicians in the Alberta election campaign have shot their last bolts on the platform and their efforts today will be to get the electors to the polls.

It is generally conceded that the present election has stirred up more interest than any election since Alberta was made a province and there will no doubt be a record vote polled.

With the transferable ballot, the counting of ballots has become a complicated affair and unless one of the candidates is elected by first choice votes the declaration of the results of the election may be delayed for several days.

The deputy returning officers will count the first choice votes and report to the returning officer immediately after the poll.

Will Dedicate Moravian Church

The dedication services of the Moravian Church which has been built 12 miles west of Didsbury, will take place Sunday morning at 10:30. The dedication service will be conducted by Bishop Charles A. Gutensohn, of the Moravian Church in Calgary.

Speakman Supports A. B. Claypool

A. Speakman and A. B. Claypool spoke at the Opera House on Tuesday night at the closing meeting of the provincial campaign in Didsbury.

Mr. Claypool gave an outline of what the U.F.A. Government had accomplished. He pointed to the public works accomplished and the social service introduced during their term of office and claimed that the administration of government was costing less than in 1921 even with more departments to administer.

Mr. Speakman dealt with monetary reform and social credit. He said he had been a student of social credit for ten years and showed a number of reasons why the Aberhart Plan was not practical. He advocated monetary reform and said that the first step would have to be the Nationalization of the Bank of Canada.

D. Dipple occupied the chair.

Mr. Reid Clarke, Miss Sadie Noad and Fred Duggan motored to Banff over the weekend.

Agriculture In School

An almost perennial subject of discussion is the school curriculum, what it should and what it should not contain. Many there are who contend that the present-day curriculum in most countries is over-loaded with subjects and contain much that should not be there. There are others, including numerous organizations, who are constantly demanding that this or that new subject be added. For example, there are those who strongly advocate the teaching of temperance, not so much in the wider meaning of that term, but in direct relation to the use of intoxicants. Others insist that religion should be taught, while others again object even to recitation of the Lord's Prayer or the Ten Commandments. Still others call for the teaching of co-operation, the meaning and use of money, while the number of so-called social subjects and problems which different groups insist should be included in the curriculum are almost beyond calculation.

The real difficulty seems to lie in the opposing views held as to what is education, and what is the function of the school in providing it to the youth of the land. Is it the main function of the school to impart information, or is it to so develop and train the mind and intellectual powers of the student as to equip him or her for the battle of life irrespective of the sphere in which they may live or the particular activity in which they may be engaged? If the former, then a very extensive curriculum would be necessary to cater to all classes of students; if the latter, a fairly short and condensed curriculum might serve all.

There is one subject, however, apart from the rudimentary subjects such as reading, writing, arithmetic, geography, history, composition, etc., which it has been generally recognized should, to the full extent possible, be included in our school courses, and especially so in the western provinces of Canada, and that is, agriculture. Addressing the recent annual convention of the Canadian Society of Technical Agriculturists assembled at Edmonton, Dr. R. C. Wallace, president of the University of Alberta, discussed this particular aspect of present-day curricula in the schools. Having stated that a good deal of thought has been given in past years to the kind of education in agriculture which can best be introduced into the school curriculum, Dr. Wallace said that it had to be frankly admitted that relatively little success had attended the efforts of those who are concerned with school education in the teaching of agriculture; that the formal agriculture of Grade IX and X of the high school had on the whole not achieved what was expected of it; and that the school garden, so enthusiastically proclaimed thirty years ago, cannot be seen in Western Canada to-day.

While stating that it would necessitate going too far afield to discuss all the underlying difficulties—lack of trained teachers, discontinuity of school life during the growing season, etc.—Dr. Wallace said it had been learned that in public and high school it was science and not the art of a vocation that could be taught successfully. For that reason he was of opinion that successful work in agriculture in the public and high school will come incidentally to the study of natural science. If the applications of the principles of science were continuously made in plant and animal processes, in weather lore, and in soil processes, interest in agriculture and in agricultural procedure would grow naturally out of the underlying scientific principles which have universal application; and the teacher would not be placed in the compromising position of posing, unwillingly, as an expert in a field where he or she was not accepted. That would be, he felt, the emphasis of the future.

On the other hand, Dr. Wallace pointed out, there had been real success in boys' and girls' club work, and in school fairs in which agricultural projects had played their part, mainly because the activities were extra-curricular and conducted in the realistic atmosphere of the farm with the help of trained district agriculturists. In so far as these projects were honestly carried out by the young people themselves, they were the soundest accomplishment which had yet been achieved in the vocational activity in agriculture of school-age boys and girls. The unfortunate fact was that this system, as yet, did not reach all schools and school children in the rural districts.

These observations by Dr. Wallace would seem to merit the serious consideration, not alone of Provincial departments of education and agriculture, but of the parents of farm boys and girls who are themselves the trustees of rural schools and directors of agricultural societies. Dr. Wallace places stress on those scientific truths which are fundamental, which must be recognized and obeyed if success is to be achieved. These can be learned in school through the natural science course, even though such course may not be distinctly labelled agriculture. Successful agriculture cannot be learned wholly from a book, or through a study course, any more than can carpentering or any other vocation. But if pupils are sent out from the schools well grounded in fundamentals, made acquainted with the immutability of Nature's laws, with intellects trained to observation, to the detection of the true from the false, imbued with initiative and ambition, they will be primarily equipped for a career in agriculture or in any profession they may choose.

Likes Life In The Arctic

Quebec Girl Spends Two Years In the North, And Is Going Back Again

Cities have no attraction for Marie Onraet, 20-year-old Gaspé girl. She found city life "empty" when she visited Montreal after two years at Cameron Bay, a mining settlement on Great Bear Lake, near the Arctic circle.

Marie spent a few days with her sister at Montreal, then left for her home in Gaspé. Late in the summer she expects to marry a young mining engineer, a graduate of Queen's, now in the Athabaska district, and return to the north to live.

In the summer of 1933 Marie, then 18 and fresh from the sheltered life of a convent, set out from Gaspé for Cameron Bay to visit her brother whom she had not seen for eight years. Travelling by rail to Peace River she joined a party taking in supplies. Then began a hazardous journey by boat through the Peace river, Lake Athabaska, Slave river, Great Slave lake and the Mackenzie and Great Bear rivers.

When the party reached Fort Franklin, 250 miles from their destination, Sept. 1, the water was freezing fast, and there was no hope of navigating Great Bear Lake that season. A plane was chartered to complete the trip, and Marie had her first experience of flying.

Trips by airplane to visit silver and pitchblende mines in the vicinity were among her later experiences. It was some time, however, before she was permitted to go down into the mines. The miners were superstitious about women in the workings.

At Cameron Bay, where Marie was one of eight white women, she had plenty of time to observe the life and customs of the Indians and Eskimos. She preferred the latter, she said, because they were cleaner in their habits than the Indians.

Wives among the Eskimos may be bartered just as are articles of commerce. Marie told of one occasion when an Eskimo offered his wife and two daughters in exchange for a fine rifle which he coveted. Stealing another man's wife, however, is a serious crime, for which, in the Eskimo idea of justice, death is the fit punishment.

Gulls Fond Of Cherries

Have Their Own Method Of Securing The Fruit

A remarkable case of birds meeting a new situation by a change in their characteristic behavior has just been reported to the U.S. Biological Survey. The birds are the gulls at Salt Lake Valley of Utah. They are fond of cherries. Great cherry orchards have sprung up through the territory in the last few decades.

Now the gull with its clumsy, webbed feet, cannot perch on the branches and help itself to cherries like the robin. It must wait for the fruit to fall which doesn't happen in the great commercial orchards. So the gulls have learned to hover over the trees, beat down the fruit with their wings and then fly to the ground and feast on their harvest. They also have been observed in the tops of the cherry trees supporting themselves with outspread wings and devouring all the fruit within reach.

The new food habit says Clarence Cottam, food-habits expert of the Biological Survey, seems to have developed as a result of a locally increased gull population and the consequent greater competition for the limited supply of usual foods.

Cheered Wrong Man

Lloyd George has a "double" in James Gray, a magistrate in Glasgow, Scotland. This the former premier learned when he recently appeared before an audience of 3,000 in Glasgow to tell about his New Deal proposals. Gray arrived at the hall first, was mistaken for Lloyd George, and received round and round of cheers. When Lloyd George arrived much of the lung power had been spent.

FASHION FANCIES

303
SUCH CHILDLIKE CHIC — EASY TO WEAR — SO SIMPLE TO MAKE AND AT MODERATE COST

By Ellen Worth

Here's a darling little coat and hat ensemble for tiny tots, so cosy to wear—and smart.

The coat buttons snugly at the neck, and being double breasted, affords ample chest protection.

In soft Copen-blue diagonal worsted was this model with hat to match. It was lined with a wool silk crepe mixture.

For more severe weather, a lovely idea is to use a quilted effect woolly backed silk. This is warmer than an ordinary lining and does away with the necessity of using an interlining.

Style No. 303 is designed for sizes 1, 2, 3 and 4 years. Size 4 requires 1 1/2 yards of 54-inch material for hat and coat with 1 1/4 yards of 35-inch lining and 3/4 yard of 12-inch interlining for hat. Pattern includes the hat and coat.

Patterns 15c each. Address mail orders to: Pattern Department, Winnipeg Newspaper Union, 175 McDermot Ave. E., Winnipeg.

Summer Fashion Book contains many more smart, cool vacation clothes. Send for your copy to-day, the price is 15 cents.

Looking For Proof

Hendrick Willem Van Loon, noted Dutch-American historian and traveler, who recently commenced a radio program from New York, as a boy of 11 in Rotterdam spent three days watching a statue of Erasmus to see if the bronze figure really did turn a page of his book every hour, as the legend said.

Suitor—And where is your sister, Jimmy?

Jimmy—She just ran upstairs to change rings when she saw you coming.

Health Of The World

Population Of Most Countries Retains Good Health During Years Of Depression

According to the data supplied by the League of Nations Year Book, it looks as though mankind not only could take the depression, but waxes healthy under its vicissitudes. The death rate in all except three of the thirty countries reporting was less than the average in the prosperous five years 1926 to 1930. The birth rate average also fell, rising slightly in the last year in five of the countries, namely, Germany, Great Britain, Ireland, Poland and Denmark.

Germany has a long lead in this regard, her population increasing 7.1 per 1,000, twice as fast as in 1933, and seven times faster than that of France, and more than twice as fast as that of Great Britain, where it was 3.3 last year. United States for 1933 was 5.7.

The League book does not touch upon the cases of mental illness, but a study made by the United States National Committee for Mental Disease and the American Psychiatric Association, asserts that mental ailments have shown no increase since the depression, a finding that is contrary to the general impression.—Winnipeg Free Press.

Completes Long Trip

Dutch Submarine Travels From Holland To West Indies

The most ambitious trip ever undertaken in any submarine ended recently when The Netherlands Navy's K-18 arrived at Amsterdam from Surabaya, East Indies, having left Helder, Holland, on November 14 last, covering a distance of more than 25,000 miles.

The submarine, under her own power and without an escort, visited five continents. The trip included fifteen, twenty and twenty-five-day stretches without a break. The submarine dived 230 times, remaining under water for 264 hours. The crew of 35 men was under Commander G. E. Hetterzhy, also aboard being Professor Felix A. Vening, of Utrecht University, charged with scientific observations. The latter made the deepest sounding ever made in the Atlantic, namely 6,700 metres between Dakar and Pernambuco.

HORSES WORK BETTER

When freed from Saddle Bolls, Cuts, Sprains, Distemper, Colic, etc., by Minard's Liniment. Keeping a bottle of Minard's in the stable as well as in the house saves Vet's and Doctor's bills.

Growth Of Root System Of Wheat Will Determine The Later Yield Of Grain

The scientist wishing to speed up the improvement of crop plants, will in future, judge them underground. What is found in the root system is reflected later in the upper part of the plant, experiments on the field husbandry plots of the University of Saskatchewan, seem to indicate.

With a little more definite data, Dr. J. B. Harrington, who is in charge of the department, expects the appearance of the root system within a month after seeding will give a clue to the yielding ability of parent plants for cross-breeding. This will save years of testing. For example, different wheats planted under similar conditions, were examined 22 days after the plant had emerged from the ground. Prelude wheat had penetrated 15 inches, Reward 22 inches, Marquis 26 inches and Reliance 31 inches. The yield of these four wheats at Saskatoon follows the same order.

Last year the total root system of these wheats was measured. The roots of Prelude totalled in length 6,700 inches, of Reward 7,300, of Marquis 8,100 and of Reliance 8,800. The yield of the four varieties followed fairly closely in the same proportion.

The advantage of the plant breeder who could definitely associate the growth of root system with the later yield of grain, is plain. If he had a hundred heads of wheat from which to choose in his plant breeding operations, he could plant a row of each and by comparing the roots of a few plants of each row, pick out his likeliest breeding material. At present the choice is more or less a guess.

T. Pavlychenko, who is carrying out these experiments, also finds a possibility of interesting discoveries from the tests that are being made of the ability of different plants to compete with others for the use of the soil.

Russian thistle is an example of a plant that makes wonderful growth as long as no other plant wants the soil. A single seed of Russian thistle given all the space it required, last year produced a root system over 17 feet in diameter. The top growth contained 6.2 grams of dry matter. Compare with this a Russian thistle growing in competition with a grain crop. The roots were only 9-10 inches across and the dry weight of the top only half a gram.

Of the plants tested, the one that put up the most successful struggle for a place in the soil was the wild oat. Where the Russian thistle had only 81 feet length of total root system when grown under conditions of competition, the wild oat had 841 feet, Hannchen barley 770 feet, and Marquis wheat 162 feet. The wild oat produced 5.2 grams of dry matter, the Hannchen barley 4.7 grams, and the wheat 0.6 grams, above ground.

There is in each plant a close relation between the size of the root system and the production of the plant above ground. When the farmer has a crop that will fight for the soil as efficiently as the wild oat, weeds will lose out in the struggle for existence.

Hottest Star

Far-Off Heavenly Body Has Temperature Of 180,000 Degrees

An unnamed, far off star, whose surface temperature is 180,000 degrees Fahrenheit, the highest heat ever measured anywhere, was described to the conference on spectroscopy at the Massachusetts Institute of Technology.

The sun's surface is barely 10,000 degrees Fahrenheit. The hottest temperatures previously reported, all on stars, were 35,000 to 40,000 degrees Fahrenheit.

Scientists Claim Discovery

Discovery that sugar can take on a mysterious form of "tan" from ultra-violet light and thereby prevent germs from growing created a sensation among biologists at the conference of spectroscopy at Massachusetts Institute of Technology.

Revival Of Town Orchestra

Movement Has Started In England And Likely To Grow

Out of this age of jazz there has sprung a new movement expressive of a desire to enjoy a deeper musical experience than that afforded by merely listening to the radio. The movement takes the form in Britain of a revival of the voluntary town or country orchestra. This type of entertainment virtually disappeared under the wave of canned music. It once held pride of place in local concert halls. Based as it was upon a sheer love of music, it deserved to endure, but the radio was overwhelming.

Now it rises again, as the Surrey String Players, for instance, eloquently testify, none the worse for the experience. Here is an orchestra in which the players pay to take part, an orchestra entirely of strings—and in which a buoyancy and enthusiasm born of a joy in expression and a delight in sharing shine through every note that is played. It is no sordid ambition which leads a shopkeeper, at the end of a long day's work, to shoulder a bass fiddle, and march off to do his part at a concert; it is no idle whim which prompts a second violin player to grind for hours in practice so that an orchestra of which he is but a humble member may approach perfection in public.

When an orchestra of this kind can survive and flourish, there is hope for the future of music. For music is not confined to the regimented few whose dexterity is the marvel of a widespread radio audience. It speaks a language whose universality has no compeer, a language which the child as well as the man or woman can understand. Is there any reason, then, why individuals should cease to participate in its development? Revival of the voluntary orchestra is the answer.—Christian Science Monitor.

Some Old Remedies

Extreme Cures Were In Use During 18th Century

If you had lived in an English village during the 18th century and suffered from gout, your physician might have advised you to swallow two ounces of soap a day for three months—besides oyster-shell or egg shell powder. For smallpox you would have been given a black powder made from 30 to 40 toads burnt in a new pot. A daily half-pint of liquor made by boiling mistletoe berries and leaves in ale was an admirable specific for fits—at least according to the village doctor. Miss Rosamond Bayne-Powell, who quotes these remedies in her new book, "English Country Life in the Eighteenth Century," explains that in those days a man could set up as an apothecary with little or no experience, and without any kind of examination.

Looking For Assistance

A clergyman who was passing a freight station was shocked to hear a string of abuse coming from the other side of a cattle-car.

On investigating he saw two workers endeavoring to force a mule inside the car. The mule, however, was determined not to enter without a struggle.

"Ah, my good fellows," said the clergyman, "I see you are having a hard task. Can I be of any assistance?"

"Yes," said one of the men, wiping his perspiring brow. "Being a preacher, maybe you can tell us how Noah managed to get two of these consarned mules into the Ark?"

Royalty Accepts Song

Written by Maurice Zbriger, well-known Montreal musician, the song, "Marina," has been accepted by their majesties the King and Queen. Official notification of the acceptance has been received. The song was played at the jubilee court ball at Buckingham palace June 13.

Black Powder And Dynamite

Two Powerful Explosives Are Quite Different In Action

There is little understanding of the difference between the action of black powder and dynamite, even by those who use such explosives. Blasting or "black" powder is the oldest explosive for commercial uses. It is prepared in grains closely resembling fine lumps of high-grade coal. This is a deflagrating explosive; that is, it is fired by ignition and the gases are generated progressively as the burning spreads through the charge. It is the slowest-acting of all explosives. It has a heaving, not a shattering action and hence tends to break down the blasted material in large fragments. Dynamite is a detonating explosive. That is it is fired by shock from an intermediate agent known as a detonator. What actually happens when dynamite explodes? To answer this question it is necessary to explain briefly what dynamite is. Dynamite is a mixture of nitro-glycerin with wood meal and nitrate of soda or nitrate of ammonia or both. Nitro-glycerin is composed of several different elements, namely, carbon, hydrogen, nitrogen and oxygen, the molecules of which are grouped in such a way as to form a heavy, oily, yellow liquid. These same molecules are, however, capable of arrangement in other groups to form several different substances instead of one and the bonds that hold them together in the particular arrangement which makes nitro-glycerin are very weak. Consequently, when the detonator, which is embedded in the dynamite is set off a sharp shock and a very high temperature are imparted to the nitro-glycerin in the dynamite, thus resulting in the breaking down of the bonds between the molecules which compose nitro-glycerin.

In the Pleistocene period, California was a tropical jungle roamed by the largest land mammals.

Canada Has A Set-Up For Field Research That Is Probably Unexcelled

Experiments With Grass Silage

Old Methods Out If New Tests Are Successful

Dairy farmers will no longer have to "make hay while the sun shines", if future experiments with grass silage meet with the success of the preliminary work completed recently by the New Jersey Agricultural Experiment Station at Rutgers University. Prof. Carl B. Bender, associate in dairy husbandry, treated grass with 40 pounds of molasses and 60 pounds of water to every ton of green matter before it was put into the silo for preservation, in his experiments at the Sussex County branch of the experiment station. The grass used included third-cutting alfalfa, mixed with some timothy and fescue. It is believed that any kind of grass could be used successfully. When the grass was cut and put into the silo before it had an opportunity to cure excellent silage of good feeding value resulted.

Prof. Bender explained that if grass silage does replace hay it will mean that the haying process of dairy farms can be eliminated. It may mean, he said, that farmers will not have to depend upon the sun to cure hay but that they will be able to cut grass when its protein content is highest. Farmers can then give primary consideration to feed value, total tonnage and the second crop, rather than to the weather, which constitutes an important problem in the East, particularly with alfalfa.

The modern girl adores spinning wheels, but she wants four of them and a spare.

Dr. J. M. Swaine, Director of Research, Dominion Department of Agriculture, Ottawa, in an address on co-ordination of research to the 15th annual convention of the Canadian Society of Technical Agriculturists assembled at Edmonton, Alberta, gave a brief outline of Canada's research resources. Canada, he said, had great resources in her institutions in able and well-trained researchers, but that there was great need for more of them. The Dominion Department of Agriculture, with headquarters at Ottawa, had a staff of experts, together with 60 laboratories, large and small, which were devoted chiefly to agricultural research. They were attached to different branches of the department and were distributed throughout all the provinces. There were 34 experimental farms in the various provinces in which research projects were conducted, and there were more than 200 illustration stations available for testing and demonstrating the results of research.

Through this system of field laboratories and farms, with officers directing contact with the major field problems throughout the Dominion, the Department of Agriculture had a set-up for field research which was probably unexcelled, and it had good facilities also for certain types of laboratory research. In addition, there were several hundred officers engaged in the administration of Dominion Agricultural Acts and in extension and service work along many lines, so that excellent liaison was provided between research on the one hand and the industry on the other.

The National Research Council, said Dr. Swaine, had well equipped laboratories in a splendid, modern building, situated at Ottawa, with a small but highly-trained staff devoted in the main to fundamental agricultural research. In addition to the Division of Biology and Agriculture, the Division of Physics and Engineering and the Division of Chemistry conduct researches on special agricultural problems involving those sciences.

The agricultural colleges in the different provinces had many members of the staff and graduate students engaged in research, and they were making very important contributions in this field. They had, in addition, the most important function of discovering and training the future research workers. The Provincial Departments of Agriculture were conducting many research projects, in great part in connection with the agricultural colleges. Like the Dominion Department of Agriculture, they had highly efficient extension services which formed an invaluable liaison between the research and the industry. Then there were the university laboratories, outside the agricultural colleges, with individual research workers engaged on problems affecting agriculture. Further, there was the Canadian Society of Technical Agriculturists which was a powerful factor in the advancement and co-ordination of agricultural research through its committees, the many contacts it had facilitated, and through its publications and moral support. Various professional societies had in the same way contributed in their respective fields.

Owns Vast Toy Army

Man Has Spent Lifetime In Building Up Collection

The world's largest collection of toy soldiers, representing a modern mechanized army drawn up on a seventeen-mile battle front, has been on exhibition at the Royal United Services Museum, Whitehall, England. One man has spent a lifetime in building up the collection of 20,000 pieces from which this exhibit is selected. He is Leicester Hewitt, of Hunstanton. A third of the pieces shown he has made himself. The rest were bought. "Sometimes I have to buy soldiers from abroad," Hewitt said, "Then I give them British heads and uniforms." The unique exhibit attracted large crowds.

The SNAPSHOT GUILD

'Make Your Pictures Say Something'

Always have your subjects doing something

Hundreds of thousands of juvenile story books are sold every year and the ones we loved most in our younger years were those translated into pictures, because they had a human appeal. All through our lives we retain our interest in picture stories. It is this appeal that takes us to the movies and causes us to look through the pages of daily newspapers and magazines for pictures that tell stories of human activities.

But when it comes to snapshots, so many seem to forget how much they enjoy looking at story-telling pictures. They pick up their cameras and just shoot, seemingly satisfied to get any pictures at all, as it was in the old days of, "You Press the Button and We Do the Rest." There is a better way to take pictures.

If you want to enjoy some good laughs take a look at some of the pictures in the old family album or some of the snapshots you took several years ago. There you will probably find some perfect examples of record pictures—pictures of Uncle Charlie or Aunt Minnie in a stiff pose against the trunk of a tree or with an unattractive garage door as a background. Don't take pictures of your friends just standing looking at the camera. Have them lighting a cigarette, reading, or doing something to season the picture with that human interest touch that should be in every film you expose.

You go out on a picnic with your friends. What do you do? The chances are that you line up the

gang, you snap the camera and again have just another picture when it would be just as easy to have the crowd enjoying the lunch and perhaps one member busily engaged in the act of "exterminating" a luscious ear of corn or doing a "boarding house reach" for the potato salad.

If you were making movies, would you take foot after foot of film with your actors doing nothing? Of course not, and it isn't a bad idea to think of your "still" camera as a movie camera filming a drama. Get action and meaning. This means that you should think before you shoot.

The two pictures above really "say something." Jack's picture with his bicycle tells of "chain trouble" and a delay in meeting the gang at the vacant lot for a game of baseball, while Billie is probably telling his young girl friend about his great adventures as a sailor; of pirate's gold and Pieces of Eight.

In case you have never given much thought to this before, just take a look through a newspaper or magazine and notice which people you more—pictures of people merely looking at the camera or pictures of people doing something humanly interesting and significant. Chances are that the story-telling pictures will be your choice, and you'll make up your mind that hereafter that's the kind you'll aim to take. Good luck!

Set Open Season for Migratory Birds

The National Parks Service of the
Department of the Interior, Ottawa,
has just issued regulations regarding
Migratory Birds for the current
year.

A summary of the regulations as
they apply to Alberta follows:

OPEN SEASONS

Both Dates Inclusive—

Ducks, Geese, Rails, Wilson's
or Jack-Snipe.

In that part of Alberta lying north
of the Clearwater and Athabasca
Rivers: From Noon September 1
to and including November 14.

In that part of Alberta lying south
of the Clearwater and Athabasca
Rivers: From Noon September 15
to and including November 14.

CLOSED SEASONS

There is a closed season through-
out the year on Eider Ducks, Wood
Ducks, Swans, Cranes, Curlew, Up-
land Plover, Black-Bellied and Gold-
en Plover, and all the shore-birds
not provided with an open season in
above schedule.

No person shall kill, hunt, capture,
injure, take, or molest any migratory
game-birds during the closed sea-
son; and no person shall sell,
expose for sale, offer for sale, buy,
trade or traffic in any migratory
game-birds at any time.

The taking of the nests or eggs of
migratory game, migratory insecti-
vorous and migratory non-game-
birds is prohibited.

Possession of migratory game-
birds killed during the open season
is allowed in Alberta until March 31
following open season.

BAG LIMITS

Ducks: 15 in the aggregate of
all kinds in any day during Septem-
ber; and in any day during the
balance of the open season—Ducks
25; Geese 10 in any day; Coots
and Rails 25; Wilson's or Jack-
Snipe 25; and not more than 100
Ducks or more than 25 Geese in
one season.

GUNS and APPLIANCES

Use of automatic (auto-loading),
swivel or machine guns, or battery
or rifle, or any gun larger than
No. 10 gauge is prohibited, and the
use of any aeroplane, power-boat,
sail-boat, live birds as decoys, night-
light, and shooting from any horse-
drawn or motor vehicle is forbidden.

The shooting of migratory game-
birds earlier than one hour before
sunrise or later than one hour after
sunset is prohibited.

The penalty for violation of the
migratory bird laws is a fine of
not more than three-hundred dollars
and not less than ten dollars, or
imprisonment for a term not exceed-
ing six months, or both fine and
imprisonment.

Thanksgiving Day Set for October 24

Because the federal election day
has been set for Monday, October 14,
Thanksgiving Day has been advanc-
ed to Thursday, October 24. It was
announced last week by Premier
R. B. Bennett. In most ridings
nomination day will be Monday,
October 7.

Care Needed Handling of Malting Barley

"Take care of your malting bar-
ley," is the timely advice of the
National Barley Committee. Much
barley that would grade No. 3 Extra
or higher is spoiled in the handling.
The Committee suggests:

1. That your grain is thoroughly
ripe before cutting.
2. Stook carefully to allow the
sheaves to dry and yet protect them
from the rain. Cap the stooks if
necessary.
3. Thresh barley as soon as dry
and if possible before it is rained
upon.
4. Observe the following pre-
cautions in threshing:
 - a. Adjust sieves to ensure
least possible return to the
cylinder.
 - b. Have no end-play in the
cylinder.
 - c. Have proper clearance in
all augers.
 - d. Set concaves down at least
halfway.
 - e. Use only one or at the
most two, rows of teeth.
 - f. Thresh in the early morn-
ing, not when dry and hot.
 - g. Slow-down the speed as
low as possible. 100 R.P.M.
below normal.
 - h. Feed sheaves butt-end first.
 - i. Where much barley is being
threshed change the cylinder
pulleys to slow-down speed
of the cylinder only.

For further information see the
poster on Threshing Barley, in your
local elevator, and ask the elevator
operator for the circular on Handling
and Grading Barley, prepared by the
Plant Breeding and Production Com-
mittee, under direction of L. H.
Newman, of the Dominion Experi-
mental Farms.

WITHOUT

(By a local contributor)

What is home without a mother?
Just like heaven without God,
Or like hell with Satan absent -
Everything goes on the prod.

What is man without a woman?
What's a ship without a sail?
Like a Scotchman without whisky,
Or a shirt without a tail.

Could we eat without a stomach?
Could we drink without a neck?
Or when absolutely busted,
Could we then pay with a cheque?

But of all the knotty problems
This the worst appears to be:
How could the world exist
Without a clever nut like me?

Knight of the Road Here.

Ernest A. Wall of Waldeck, Sask.,
"Knight of the Road," who has
completed a hike of over 10,000
miles on ten cents, called at the
Pioneer Office on Monday. The
original dime is still in his posses-
sion.

Wall started from Waldeck last
July and has hiked from coast to
coast and throughout the length and
breadth of all the provinces in the
Dominion. He conducts a walking
postal service, has a great collection
of signatures and snapshots, and is
a most informal tourist guide. His
large book of autographs, etc., con-
taining the signatures of R. B. Ben-
nett, Mae West and other famous
personages, weighs 12 lbs. The book
also contained a letter to Wm. Aber-
hart from an old school friend in
Ontario. The knight's pack weighs
35 lbs. During his travels he has
slept in some of the best hotels in
Canada, also in haystacks, barns and
under trees.

The long hike was made as a
wager with the mayor of Waldeck,
who said Wall couldn't do it with-
out begging, but the knight has held
steadfast to his promise and is now
on his return journey to claim his
well-won reward.

WEDDINGS

BALES—HIGH

On August 19th at the M.B.C.
parsonage Didsbury, in the presence
of relatives, Mr. William Bales of
Carleton Place was united in marriage to
Miss Cora Katherine High of Cross-
field. Rev. F. Vincett officiated.

Burnside Notes.

Ralph Long is helping Captain
Page with his roadwork.

Messrs. Percy Saunders and
Frank Doyle were Sunday evening
visitors at Mr. Noah Eckel's.

Mr. and Mrs. Otto Bittner were
Sunday dinner guests at the Geo.
Metz home.

Mrs. Otto Bittner and Leita Cip-
perley were visitors Monday with
Mrs. Eckel.

Melvin Notes

Mrs. H. Bliss is spending the
week in Edmonton.

Mr. and Mrs. August Krebs visi-
ted Mr. and Mrs. Roy Shaw on
Sunday.

Mr. and Mrs. Charles Youngs and
Ross spent Tuesday evening with
Mr. and Mrs. Godfrey Carlson.

Mr. and Mrs. Roy McNaughton
and son Graham, who have been
holidaying at Banff, returned home
last week.

Mr. and Mrs. Peter Johnston and
family spent Sunday with Mr. and
Mrs. Stubbs, while Harold, Maud
and Glen Johnston were weekend
visitors at the Ed Vetter home in
Three Hills. Lorne Cousins was a
weekend visitor at the Peter John-
ston home.

School Re-union

On Friday afternoon the pupils
who attended Melvin school nine
and ten years ago, gathered at the
home of Mrs. W. D. Klein, who
had been their teacher at that time.
It was agreed to call her Miss Davis
again for the afternoon, and after a
time spent in recalling old experi-
ences, old school games were played
on the lawn. Snapshots were
taken to supplement those of ten
years ago and afforded much amuse-
ment.

At six o'clock a delicious buffet
luncheon was served, after which
the crowd dispersed to gather again
later at a dance in Farrant's barn.

Among those present were the
following visitors from outside the
district: Mr. Walter Swingle, form-
erly chairman of the school board -
now of Salem Oregon - and family,
and Miss Mabel Hyndman of Cal-
gary. A very enjoyable time was
reported by all those who were able
to attend.

FACTS About Enarco Motor Oil!

Only two major oil companies operate lubricating
refineries in Canada. The Canadian Oil Companies, Lim-
ited Refinery at Petrolia, Ontario, is one of the best
equipped lubricating refineries on the continent.

Enarco Motor Oil sells in the United States at the same
price as motor oils which are selling in Canada at an av-
erage of forty cents a gallon more.

The additional cost of higher priced oils sold here cov-
ers import duty and jobbers' profits.

Every gallon of **Enarco Motor Oil** sold in Canada is
refined at Petrolia, Ont., and sold direct to our dealers.
We save you the duty and the jobbers' profits.

Enarco Motor Oil is scientifically refined from the
highest grade paraffine base crude, in one of the best
equipped refineries on the continent.

Enarco Motor Oil is thoroughly de-waxed.

Don't mistake price for quality. **Enarco Motor Oil** will
satisfactorily lubricate any make of car, truck or tractor
at a saving to you.

Remember that few, if any, Motor Manufacturers
today specify any particular oil. They know there are
many good oils and we are certain if you enquire, they
will recommend **Enarco Motor Oil**.

When next buying motor oil, ask yourself this question
"Am I getting value for my money or is about one third of my
money going to Import Duty and Jobbers' Profits?"

Enarco Motor Oil is put up in gallon and quart cans,
sealed at our own Refinery. This gives you clean oil, and
guaranteed measure.

Try **ENARCO** the next time you need Motor Oil!

WORLD HAPPENINGS
BRIEFLY TOLD

Friends of the late Col. T. E. Lawrence — Lawrence of Arabia — announced the dean of St. Paul's Cathedral had offered space there for a memorial to him.

Dr. E. Cora Hind, of the Winnipeg Free Press, was the luncheon guest of the directors of the Liverpool Corn Trade Association on July 3 at Liverpool.

Notices inviting all negro men in Montreal aged 21 or over, in good physical condition, to register for service with the forces of Emperor Haile Selassie, of Ethiopia, have been posted throughout Montreal.

A loan of \$500,000 has just been authorized by the Dominion government to the province of Manitoba for re-loan to the city of Winnipeg to meet expenses of the city in connection with 1934 relief projects.

Sweden recently celebrated the 500th anniversary of the Swedish Riksdag or parliament, the first recorded meeting being in 1435. Only the British and Icelandic parliaments are older than Sweden's.

First import of its kind through Montreal, anthracite coal from French Indo-China—a load of 8,000 tons carried in the Norwegian motorship Bonneville—arrived recently to be sold on the Canadian market.

Rear-Admiral Gerald Charles Dickens, a grandson of the famous novelist, was appointed commander-in-chief of the reserve fleet of the royal navy, in succession to Vice-Admiral Astley-Rushton, killed in a motorcar accident.

A crate of used books arrived at the entrance to the London county jail. Just a bit of reading for the prisoners. The titles included: "A Book of Escapes" by John Buchan, Canada's governor-general designate, and "Bars of Iron," by Ethel M. Dell.

Returning To Japan

Charming Native Of Korea Spends
Three Years Attending Canadian Schools

Sada Nawise, charming native of Korea, is returning to Japan after spending three years in Canada attending Canadian colleges. She plans to take back to her native land methods of western education.

She taught school in Korea, later going to Japan, where she worked with Dr. P. G. Price, evangelist. On his advice she left for Canada, spending two years at Alma college, St. Thomas, Ont., before studying at a training school. She plans to be a religious educationist in Tokyo.

In a Japanese kimono she loves to dance the interpretive dances of her people. She is an accomplished musician.

Miss Nawise is visiting in Edmonton as the guest of Miss Dorothy McBain, with whom she attended United Church Missionary Training College in Toronto last year.

She said no English translation could do justice to Japanese poetry, which was written in two measures, one containing 31 beats, metrically divided, and the other only 17. Children in their earliest lessons were taught verse, and she wrote her first poem at the age of five.

Japanese women were invading every field—even the police force, and were popular officers, she said.

Making Use Of 'Planes

More Than Hundred Kept Busy By
Russian Industries

Industry in Soviet Russia is keeping 110 airplanes busy. They serve factories, construction jobs, oil fields and mines, transporting square parts and carrying experts in emergencies. Planes are widely used by the oil trusts in geological prospecting and by the power industry to determine points where high-tension overhead lines have been damaged.

Fail In Driving Tests

A greater number of women than men motorists have failed to pass the new official driving tests in Great Britain. A special report showing the percentage of the women "ploughed" by the Ministry of Transport examiners since the tests began has just been made public.

TEN TIMES HIGHER THAN NIAGARA

Della Falls on Vancouver Island, reached by road and trail from Victoria. These falls are 1,580 feet high or exactly ten times higher than Niagara and nearly four times higher than the famous falls on the Victoria Nyanza on the Zambezi in Africa. They are in the heart of Vancouver Island and are reached from Victoria by motor road 138 miles and then 10 miles trail. They are the highest falls on this continent and the second or third highest falls in the world.

Italy's Wheat-Mixing Law

Has Cut Down Imports Of Grain
From Canada

Imports of Canadian wheat into Italy are restricted, not only by relatively high custom duties—over six dollars per 100 kilos—but also by the application of the wheat-mixing law. The latter, as at present effective, compels Italian millers to grind 99 per cent. of both hard and soft Italian wheat, thus leaving only one per cent. foreign wheat in the finished product. In spite of these difficulties, Canada exported 24,512 metric tons of hard, 18,523 metric tons of soft wheat, and 15,594 quintals (220 pounds per quintal) of wheat flour to Italy in 1934.

No Test Needed

American paper money will fold five thousand times by actual test, without cracking or breaking. There is no need for any such test in Canada, where it is impossible to hold on to paper money for more than one folding says the Ottawa Citizen.

Restrictions For Newsboys

Vendors In Peiping, China, Forbidden
To Shout Headlines

Deeming that the loud cries of newsboys tended to spread alarm and uneasiness in that already nervous city, the Peiping authorities have issued an order whereby all news-vendors are prohibited from shouting the headlines of their papers, but must limit themselves to merely saying the names of their publications.

Another reason for the new ruling is that the newsboys advertise in a particularly loud voice the racy and vulgar stories that appear even to the last detail, in the less reputable papers.

Bread Made From Seaweed

Seaweed bread now has a modest sale along the Pacific slope. It's made from giant kelp plants that grow in profusion along the coast and contain iodine and other mineral considered beneficial. And while the bread has an odd flavor, its far from unpalatable.

Household Arts

PATTERN 5122

Now is the time to stock up on such things as bedspreads. And how effectively you can do this with this lovely basket design. It's made in the simplest stitches and grows quickly under your needle. Do it in the colors that will harmonize with your bedroom whether it's dainty or bold in coloring. If you wish scarfs and other linens to go with it, you will find matching motifs in Pattern 5155 which appeared some time ago.

In pattern 5122 you will find a transfer pattern of a basket 15 1/4 x 19 inches, a bolster motif 7 x 18 inches, and four corner motifs 4 1/2 x 5 1/2 inches; material requirements; color suggestions, and illustrations of all stitches used.

To obtain this pattern send 20 cents in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg Newspaper Union, 175 McDermott Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

A Remarkable Display

Perfect Organization Made Royal
Air Force Review Impressive

The recent review of the Royal Air Force by the King was one of the most remarkable pieces of organization ever achieved by man.

Three hundred and fifty machines were reviewed on the ground. When the King had looked over the first 182 and while he was still looking over the remainder, these 182 began to take to the air. They ranged from heavy bombers to fast fighters. It took two hours to get the 182 into the air where they circled around until such time as the King should reach a reviewing stand by car 32 miles away. Yet so precise was the working out of the schedule that on the split second when the King took his place the first of the great armada of the air appeared above. When it is remembered that the speeds of the planes varied from 100 miles an hour to 250, and that variations of wind had to be calculated for in advance, the exactitude of the review was astonishing. Different types of machines streaked across the sky, and half way through the program a stunt group of nine machines intervened with an amazing series of evolutions, wing to wing, the orders of the commander in the leading plane being heard by the 150,000 spectators through loud speakers on the ground. After the rest of the machines had followed they formed in rear of the others which had been "killing time" in the air a long way past the field, then the entire 182 came roaring back in one mass like a covey of gigantic birds, dipping as they came abreast the royal stand. The whole aerial review just took 35 minutes and there was not a single mishap.—St. Thomas Times-Journal.

Recipes For This Week

(By Betty Barclay)

PECAN CHOCOLATE MOUSSE

2 squares unsweetened chocolate
1 1/4 cups cold milk
1/2 cup sugar
4 egg yolks, slightly beaten
1 package strawberry-flavored gelatin
1/4 teaspoon salt
1/2 teaspoon vanilla
1/2 cup pecan meats, coarsely cut
1 cup cream, whipped

Add chocolate to milk and heat in double boiler. When chocolate is melted, beat with rotary egg beater until mixture is smooth and blended. Combine sugar and egg yolks; add small amount of chocolate mixture, stirring vigorously; return to double boiler and cook until thickened, stirring constantly. Add gelatin and salt and stir over hot water until gelatin is dissolved. Chill. When slightly thickened, add vanilla and fold in nuts and cream. Turn into individual molds. Chill until firm. Unmold. Serves eight.

BLACKBERRY JAM

4 cups (2 lbs.) prepared fruit
7 cups (3 lbs.) sugar
1/2 bottle fruit pectin

To prepare fruit, grind about two quarts fully ripe berries or crush completely one layer at a time so that each berry is reduced to a pulp. Measure sugar and prepared fruit into large kettle, mix well, and bring to a full rolling boil over hottest fire. Stir constantly before and while boiling. Boil hard 3 minutes. Remove from fire and stir in bottled fruit pectin. Then stir and skim by turns for just 5 minutes and cool slightly to prevent floating fruit. Pour quickly. Paraffin hot jam at once. Makes about 10 glasses (6 fluid ounces each).

Keen Gardeners

It would be difficult to say which is the keener gardener—the Prince of Wales or the Duchess of York. Perhaps the Prince's enthusiasm is the greater, for gardening is a new hobby to him. The Duchess has memories of home gardens that go back to her earliest childhood.

There are no new places left in the world to discover, laments an explorer. We had been wondering why it was so hard to find a fresh spot for a picnic.

Little Journeys In Science

ACIDS

(By Gordon H. Guest, M.A.)

Acids are important hydrogen compounds which when dissolved in water possess a sour taste. They also have the property of turning blue litmus, a dye extracted from certain lichens, red. A substance such as litmus, which undergoes a change in color upon the addition of an acid or alkali, is known in science as an indicator. Thus litmus is red in the presence of an acid and blue in the presence of an alkali.

The most common acids are sulphuric, hydrochloric, nitric, carbonic, and acetic. Acetic acid is the active part of vinegar, which has been used by man for thousands of years. Apples, lemons, grapefruit and other fruits owe their agreeable flavor, in part, to acids, such as malic, citric, and tartaric. Acids always contain the element hydrogen and often oxygen.

Hydrochloric acid gas may be prepared by pouring strong sulphuric acid upon salt. It is a very soluble gas and the solution is known as hydrochloric acid. This acid is used for the preparation of hydrogen and chlorine and for cleansing the surfaces of metals.

Concentrated sulphuric acid, or oil of vitriol, contains about 5 per cent. of water. When the strong acid is poured into water, an enormous quantity of heat is generated. Concentrated sulphuric acid has a great affinity for water, or for the elements which make up water, namely hydrogen and oxygen. Cane-sugar, for example, is a chemical compound composed of the elements carbon, hydrogen, and oxygen in chemical union; and when strong sulphuric acid is poured into a syrup of sugar, the sugar turns black and froths violently, because the hydrogen and oxygen are taken from the sugar to form water, leaving black carbon. Nearly all chemical industries use sulphuric acid and hence vast quantities of it are manufactured.

Nitric acid when pure is a colorless liquid. The concentrated acid contains about 68 per cent. of the active substance and 32 per cent. of water. When this acid is mixed with hydrochloric acid a mixture known as aqua regia is produced. Aqua regia is the latin for royal water and was given that name because it dissolves the noble metal gold. Nitric acid is used in the manufacture of explosives and fertilizers.

Carbonic acid is produced by bubbling carbon dioxide gas into water and is found in natural waters. Although it is a weak acid, which decomposes very readily, it plays an important role in certain processes which take place in nature. Thus, it dissolves limestone, and gradually dissolves carbonate rocks to form caves.

Earth May Blow Up

Surrounding Shell Being Gradually
Melted By Internal Heat

Old Dr. Bailey Willis, 78, of Palo Alto, who loves to scare the wits out of "seismophobic" Southern Californians, presented a picture of Earth's history and structure which disquieted many a long-range imagination. The Earth, Dr. Willis suggested, originally was an aggregation of cold substances which gravitation pulled into a tight little planetary mass somewhere between 50 million and two billion years ago. Ever since, radioactive elements in Earth's material have been driving energy towards its centre until to-day the core of Earth is a hot fluid mass of iron, nickel, radium and other heavy elements 4,000 miles in diameter surrounded by a rocky shell 2,000 miles thick. As cons pass, "the persistent release of atomic forces continue, and will continue to supply heat and melt the surrounding shell with the result that Mother Earth may eventually take her place among the stars."

Seeking a logical reason for the frequency of earthquakes along the shores of the Pacific, Dr. Beno Gutenberg of Pasadena presented a thesis that the Pacific Ocean represents a vast area from which Earth has lost 20 miles of outside skin. That "raw spot in Mother Earth's side promises to explain the true nature of Earth's disturbances, the crust's movements appearing to extend along the edges of the skinless areas. We shall never be able to predict the day on which an earthquake will occur. But it is possible that we shall be able to set the date to within a year or so."—From Time.

Women pipers, it has been decided, are not eligible for membership of the London Scottish Piping Society, a body composed of bagpipe players and learners.

MISS ALADDIN

—By—
Christine Whiting Farmer
Author Of
"One Wide River To Cross"
"The Unknown Port", Etc.

CHAPTER IX.—Continued

"Sometimes they're fierce Mother insists it's because we're so near the sky! Those storms are the only thing in the world, I believe, that she's afraid of. Her father was killed by lightning before I was born."

Nance shivered.

"No wonder she's frightened! It's a miracle this tree has escaped being demolished. Does anybody know how old it is?"

Matt shook his head.

"It's a great deal older than any one in these parts surely. Miss Columbine remembers it just like this when she was only a little girl. It must have been struck by lightning many times. I often think—that is—"

Matt was, all of a sudden, self-conscious again; but Nance was merciless.

"Go on," she begged.

"I only mean," he hesitated, "that—that this tree must have seen a lot of interesting things: Pioneers, you know, in their covered wagons; the first settlers struggling to build homes; Indian massacres or war dances; and later, prospectors trudging along with burros. Why, even the old Spanish expeditions may have passed this way more than two hundred years ago! I—I often wonder how many of those sights this pine looked down on."

Nancy was silent, partly because no boy had ever talked this way to her before, and partly because what Matthew said had stirred her imagination. She was silent so long that the young man moved uneasily.

"I—I suppose, all this sounds sort of foolish to—a girl like you, but—"

"Why should it?" Nance looked at him so disconcertingly that Matthew lowered his eyes for just a moment. "I guess you thought I was being dumb; but really, I was trying to see things—the things you say this old tree must have seen. And by the way!" (Nance glanced up, smiling, at which Matt became pleasantly aware of a dimple in her left cheek.) "There is something else it saw that you didn't mention. It witnessed the betrothal of Victor and Aurora Tubbs! She said I'd find their initials cut in the bark."

Matthew laughed.

"Mother remembers those initials; but lightning ripped that bark off years ago. Aurora hasn't been up here since she put on flesh, and that's almost as far back as I remember. I hate to hurry you, Miss—er—well," (desperately, as the girl grinned at him), "Nancy, but it's getting along toward sundown and I'll soon be cold. Shall we move on?"

Nance said, regretfully: "It's so wonderful here I can hardly tear myself away."

WHEN YOUR DAUGHTER COMES TO WOMANHOOD

Most girls in their teens need a tonic and regulator. Give your daughter Lydia E. Pinkham's Vegetable Compound for the next few months. Teach her how to guard her health at this critical time. When she is a happy, healthy wife and mother she will thank you.

Sold at all good drug stores:

Lydia E. Pinkham's
Vegetable Compound

self away. Is that the path which leads down by the Tubbs estate? I'll try that trail some day when I'm energetic; and when I get homesick I'll come up here to get away from every one, and either bawl my head off or snap out of the attack."

"We'll have to see that you don't get homesick," returned Matt with unexpected gallantry.

A half hour later they drew up at Miss Columbine's side door to find Mark Adam scanning the road impatiently, and Jack seated on a suitcase.

"Have you got a job?" gasped Nance, spying the luggage as she took Mark's upstretched hand and jumped down lightly.

Jack nodded, while the other boy exclaimed: "Where the dickens have you been, Matt? We've telephoned everywhere to find you."

"Blame me," said Nance, while Matthew, flushing again, retorted: "Hasn't a feller got a right to take an hour off? What's up?"

"Good and plenty. Luke's broken a leg."

Matthew started, his face grave.

"You're not kidding, Mark?"

"Sure I'm not. That new bronc kicked him. Dad and Mother have carried him to the hospital in the Ford."

"Is it a bad break?"

"How'm I to know? But" (turning to Nance with his customary smile), "it's a case where an ill wind blew somebody good. Jack's got a job with us till Luke's around again. Pile in, feller. We must be going. We'll take good care of your little brother, Nancy!"

"Hi! Wait a minute!" This was Aurora, bursting through the door with a covered basket. "I made a layer cake this mornin' and it's sure to get stale with Jack away. I cut a hunk for Nancy, and the rest's in the basket with a couple o' loaves of good fresh bread. You better take it, Mark Adam. Your mother won't get back in time for supper; and if she does she'll be too upset to get a proper meal even if she knew how, which goodness knows she doesn't and never did. You hold that basket right side up, boys, and . . ."

She was still expounding voluble instructions when the engine started. Mark blew her a kiss of thanks as they drove away.

CHAPTER X.

It was ten days before Nancy saw her brother again, a rather lonesome ten days, on the last of which the Colorado sunshine gave way to what Aurora called "a baby blizzard," and Cousin Columbine went to bed with a cold. The wind was furious, and Nance retired to her tower and surreptitiously donned two pairs of silk stockings since no chance had arisen to buy sport hose.

Even a stouter heart than hers would have found the day more or less gloomy. The halls in the old house were frigid; and wind blew through every crack. At Aurora's invitation she took pen and paper into the kitchen, meaning to write letters; but under the good woman's steady fire of conversation it was impossible to concentrate, and at last she sought the sitting room in search of reading matter.

To one of Nancy's generation the contents of the walnut bookcase were not enticing. There was a handsome edition of Scott, but one glance at long pages of description was enough. There were two old-fashioned novels by some one named Mulock; a "Pilgrim's Progress"; a book called "What To Do Before The Doctor Comes," and a set of Dickens which looked a bit less hopeless than the others. Nancy could remember her father reading parts of "David Copperfield" aloud when she was little; but these volumes were big and heavy. They looked endless, too. In

desperation she went back to the kitchen and Aurora's monologues.

"Is there a public library in this place?" she questioned.

Aurora popped a pie into the oven and responded: "What good would it do? So far's I know they ain't any one in Pine Ridge but Victor Tubbs that's got time to read, and it takes him all day to read the paper. And no wonder! He don't let even the smallest advertisement get by him. He's upset Juanita considerable by mentionin' a place at Colorado Springs where you can get a permanent wave for two dollars and fifty cents. She's asked Eve Adam to take her down some day when they go to see Luke at the hospital, and I don't hardly expect to recognize my own daughter when she gets back. No, we don't have any use for a library at Pine Ridge."

Recalling the "confession" magazines she had seen Juanita indulge in at the drug store, Nance suggested: "Perhaps if you had a real good library your young folks wouldn't waste their money on such trashy reading matter."

"Maybe," admitted Aurora, "but I doubt it. And if you mean those love magazines, I'll admit I find 'em real refreshin'."

"But I thought you had no time to read!"

"No more I do," replied Aurora, undaunted at this sly thrust, "but sometimes I glance at 'em to rest me. In one o' them stories a boy and girl got engaged under a pine tree like Tubbs and me. Here's Mark Adam with the milk. Shut that door quick, Mark. No matter about bringin' in some snow along with your feet. I ain't scrubbed my floor yet, and I ain't goin' to till things dry up. Shut that door! Do you want to freeze us? How's Jack gettin' along? How's Luke? And is your mother bearin' up under this affliction?"

Mark deposited two milk bottles on the table as he said: "One question at a time, please. This is some storm, isn't it? Are you occupying the kitchen in order to keep warm, Nancy, or to profit by the conversation of our estimable Mrs. Tubbs?"

"Don't you be uppity, Mark Adam," snapped Aurora. "She's here to get warm, and no wonder with nothin' but a layer of silk stockin' to protect her legs. You haven't answered—"

"Give me time," Mark interrupted, warming his cold fingers at the stove. "Jack couldn't do better. We'll have an expert milker long before Luke's ready for the job again. He sent his love to every one, and so would Matt if he wasn't so bashful. Say!" (turning to Nancy), "how'd you ever manage to rope my shy brother into taking you up to the old pine?"

"Rope him!" exclaimed Nancy. "I call that an insult."

"Well to tell the truth," broke in Aurora, "I almost lost my breath when you rode into the yard the other day. It ain't Matthew Adam's habit, takin' girls to ride; and you're so stylish, Nancy, I donno how he got up courage to suggest you goin' in that old truck."

"That's the advantage of a college education," observed Mark, with a wink for Nancy. "The emergency arose, Aurora, and despite his fear of the female of the species, my brother was able, because of his superior learning, to conquer—"

"Goodness gracious!" burst out Aurora, "I never heard such rubbish. Take off that coat, Mark Adam, and let me dry it. What are you giggling

THE NEW BISCUIT SENSATION THAT HAS TAKEN CANADA BY STORM

Nutty flavored, slightly salted, little Soda Wafers that make a real "event" out of all entertaining.

Christie's Biscuits

"There's a Christie Biscuit for every taste"

about, Nancy? You ought to encourage a young man to talk more sensible. How's Luke? And you didn't say if your mother was bearin' up. I always thought Luke was her favorite, or maybe it's because he ain't so husky as the rest of you."

Mark grinned as he slipped off the wet jacket.

"Luke's doing first rate. He'll be home next week and hobble round on crutches. Mother's all right; and if she likes Luke best, Aurora, it's only because he's not so good looking as the rest of us. It's what they call the—er—ugly duckling complex, I suppose."

Aurora snorted.

"I donno what anybody's complexion has to do with it; but there's some folks in Pine Ridge that think Luke Adam's the handsomest of the lot, not excepting Matthew. And he's an awful sweet boy too. There's Miss Columbine pounding. No, Nancy," (as the girl sprang up), "I'll go find out what she wants while you keep Mark company. Set close to the range, Mark Adam, and get yourself het through."

"Tell me," said Nancy, "is Jack really doing the work all right?"

"Sure he is!" Mark was straddling a kitchen chair, his elbows resting on its back while he looked at the girl intently. "Mother's adopted him already—says he's just like one of her own boys, and that's high praise—from Mother! She wants you to come out and spend a Sunday when it's good weather. What in time do you do with yourself a day like this?"

"Listen to Aurora," replied Nance softly. "I wanted to read, but Cousin Columbine's books look stuffy; and Aurora tells me there's no public library. She says no one in Pine Ridge has time to read. What do they do—evenings, I mean?"

"According to the old story they 'set and think, and sometimes they just set!'" laughed Mark. "I'll bring you some books from home to-morrow, Nance. If we had a library here, even a small one, I bet the population would profit by it. All most of these people read is trashy magazines."

"That's what I told Aurora; but she said—"

"You're to stay to dinner," announced Aurora, bursting in upon them. "Miss Columbine says she wouldn't send a dog into this storm without he had a good full stomach. Don't you make any objections, Mark Adam. Folks can wait for their milk an hour longer. Miss Columbine says so herself. She says

they're lucky to get their milk at all, a day like this, and no one without the Adam conscience would have started out. Mercy to goodness! Are my pies burnin'?"

But the pies were safe, browned to perfection though Aurora declared her fright had given her a palpitation.

"And I can't get a proper meal with young folks clutterin' up my kitchen," she declared. "You put some coal in the sittin' room stove, Mark Adam, and then you and Nancy clear out till I call. Dinner'll be ready in no time; and Miss Columbine'll be offended if you don't stay. She says maybe you'll keep Nancy from bein' homesick."

"In that case," returned Mark with an engaging smile, "I can't refuse."

(To Be Continued)

Novel Club For London

King Is President And Only Famous Hunters May Join

One of the most exclusive clubs in the world has opened up permanent London quarters, according to William Gourlay, manager of the American Express Travel Service. The quarters will house the membership of the Shikar Club, composed of famous hunters, its membership only acceptable to men who can boast hair-breadth escapes from the jaws and claws of man-killing beasts of the jungle. The president of the club is the King, the patron is the Prince of Wales and the Earl of Lonsdale is the chairman. The decorations of the place will be enlarged photographs taken by individual members.

The total shipments of certified potato seed from Canada in 1934 amounted to 1,328,745 bushels, 728,582 bushels being shipped from January to May inclusive, and 600,163 bushels from the fall to December 31.

STOP THAT ITCH In One Minute

D. D. D. Prescription Speeds Relief

It is really surprising to see how Dr. D. D. Dennis' pure, cooling, liquid, antiseptic D. D. D. Prescription quickly stops itching tortures of eczema, pimples, mosquito or other insect bites, rashes and other skin afflictions. Forty years' world-wide success. Its gentle oils penetrate the skin, soothing and healing the inflamed tissues. No fuss—no muss. Clear, greaseless and stainless—dries up almost immediately. Try D. D. D. Prescription today. Stops the most intense itching instantly. A 35c trial bottle, at any drug store, is guaranteed to prove it—or money back. D. D. D. is made by the owners of ITALIAN BALM.

Doings of Our Neighbors

At Innisfail: Sergt. T. A. Jensen, all-round Alberta shot, captured the Bankers' match, one of the richest events of the Dominion, at the annual meeting at the Connaught Rifle Range, Ontario, last week. He was also successful in winning the prize for the grand aggregate.

At Carstairs: Five new stop signs have been placed on streets leading onto the main street and five "No Parking" signs were erected Wednesday.

At Olds: A letter from our Mayor, who met with a motor accident at Portland, Oregon, recently, contains bad news. Mayor Campbell underwent an operation on his knee and the time of his confinement in hospital is set at six weeks. The injury to his knee-cap was much worse than anticipated, as it necessitated the removal of pieces of bone. R. B. is regretting that he cannot be home on election day.

At Crossfield: Having learned no doubt, by ways, known only to clever little insects, the bees of Frank Purvis decided to emulate the feat of Major Hoople's and swarmed into town on Monday last, around the outside of the local post office.

Whether or not it was the scent of the new gum used on the stamps, or the aroma of our worthy postmasters tobacco, that attracted them, we do not know.

LOCAL & GENERAL

Try a pair of our \$1.45 Rider Pants. T. E. Scott

Mr and Mrs Norman S. Clarke are holidaying at Banff.

Mr D. Grieve, daughter Marjorie and Miss Ruth McTavish spent last Thursday at the home of Mr and Mrs Allen Hunsperger.

Mr and Mrs. Emerson Shantz returned home on Saturday from the Breton and Greenfield district where they were conducting Vacation Bible School.

Misses Ann Morton and Edith Hunsperger, and Messrs. Grant Carlyle and Ozo Traub were dinner guests at the home of Mr and Mrs Allen Hunsperger Thursday last.

We reported last week that two boys caught a pair of foxes on J. Manson's place last week. Bob Wrightson reports that he caught one of the old foxes and will take it home with him to Innisfail.

George Julien, Tom Johnson and Jimmy Halton gathered up their camping outfit on Tuesday and went for a few days fishing in the Hunter Valley country. We expect to report some big catches next week.

Mr. and Mrs. N. S. Miller and family from Baden, Ont. who have been visiting at the home of Mr. and Mrs. M. Shantz and friends in the Westcott district left Tuesday evening for Prince Rupert where they will stay for a short time before returning to their home in Ont.

Report Alberta Crop

81 p.c. of Normal

Condition of Canada's wheat crop as a whole is somewhat better than last year but a large proportion of the wheat will be below contract grade, the weekly grain report of the Canadian Bank of Commerce stated Saturday. Some frosts occurred in Alberta, but the damage is not believed to be serious.

By provinces the wheat crop stands as follows: Manitoba 62 per cent of average; Saskatchewan 85 per cent, and Alberta 81 per cent.

Rust infection has spread across Saskatchewan almost as far as the Alberta border.
